

國立台灣大學九十三年學年度碩士班招生考試試題

科目：兒童牙科學

題號：192

共 1 頁之第 全 頁

1. A 5 year-old leukemic boy, who has several dental carious teeth and gingivitis, is suffering from toothache on his lower right molar area. What is your treatment plan to relief his acute conditions? Once the leukemia is in remission and after consultation with the child's physician, what adjustments for routine dental care should be followed? (30%)
2. Please describe principles of treatment planning for a new dental child patient. (30%)
3. Describe regulatory factors of craniofacial growth. (20%)
4. Describe some occlusal features that occur relatively frequently in the established primary dentition. (20%)
