查詢功能

1. 簡易查詢:使用者於輸入框鍵入想要找的關鍵字,亦可限縮主題與內容形式(Book/Chapter)

- 2. 進階查詢:
 - 提供多欄位查詢
 - 提供 And、Or、Not 關聯多個以上查詢詞
 - 可自行增加/刪除查詢欄位
 - 限制年代、語言
 - 顯示所有結果

書籍資訊

low value addition with limited processing and limited agribusiness activities. There are very few contractual arrangements between producers and end users of potatoes (e.g. processors, fast food restaurants or supermarkets). In order to transform the potato subsector from subsistence to a vibrant, commercially oriented subsector, a new roadmap - one which leverages available resources to deliver economic growth and opportunity, improved food security and nutrition, and environmental sustainability is required. This chapter presents a roadmap that provides a guide on the core investment areas necessary to revitalize the potato subsector. The roadmap is anchored on three investment areas, namely: (i) the seed potato value chain; (ii) the ware potato value chain; and (iii) the processed potato value chain. The targets of the roadmap are to increase yields by at least 20% in the next 10 years to achieve three overarching objectives, namely: (i) a 15% increase in farm incomes; (ii) improved food security; and (iii) more business opportunities for at least 10% of potato-growing households. These growth targets will be achieved through implementation of several flagship projects in each of the priority value chains focusing on several areas including value chain financing, improvement of markets, formulation of favourable policies, adoption of improved farming technologies (e.g. irrigated potato farming) and promotion of value addition
