enzyme-based immunoassay (EIA) [i.e. enzyme-linked immunosorbent assays (ELISAs)];

These assays typically use a change in color of light emitted to measure the concentration of the analyte. EIAs offer numerous advantages over other immuno techniques because their signal is amplified by forming a great number of product molecules. Those based on heterogeneous conditions (e.g., ELISAs) are especially widely used.

ELISAs may be carried out in different formats. Competitive assays are the most common and can be performed in different ways, such as:

BARTOLOMEEVKA, BELARUS - JANUARY 2006: "CHERNOBYL - 20 YEARS ON"On 26th April, 1986, at 1.23am the world's worst **nuclear disaster** happened at Reactor Number 4 at Chernobyl **nuclear** power station in northern Ukraine. 190 tons of highly radioactive material were released into the atmosphere destroying the lives and land of millions of people. The explosion exposed the people around Chernobyl to radiation 90 times greater than from the Hiroshima bomb. The UN estimates that 9 million people, including 4 million children, are affected by the **disaster**. Radiation specialists expect nearly 1 million people to develop cancer as a direct result of the accident. In Belarus, next door to Ukraine, almost 400,000 people have been forced to leave their homes and become environmental refugees as a result of the contamination left by the explosion. Around 2,000 towns and villages have been abandoned and become a radioactive desert, overgrown with poisoned vegetation and fenced off by barbed wire. 20 years after the **disaster** 99% of the land in Belarus is contaminated. 25% of Belarusan farmland is a **nuclear** wasteland. Thyroid cancer has increased by 2,400%. Congenital birth defects have increased by 250% and there has been a 1,000% increase in suicides in the contaminated areas. Picture shows Lena Muzychenko who, with her husband, refused to leave her home in the deadly 'purple zone' near the Ukraine border. They survive on the food they produce in their polluted garden. They say, "It is better to die from radiation than hunger."(©Tom Stoddart/Getty Images), Database: Image Collection Location: Bartolomeevka Belarus © 2006 Tom Stoddart, Database: Image Collection

Ur. Martin Lutner King The fact is that schools, particularly in the north, are more segregated today than they were in 1954 when the Supreme Court rendered it's decision outlawing segregation. These are the hard facts. Now try to solve these problems, we've gotta rise up, we've gotta organize, we've gotta mobilize and we've go to work to solve these problems.

MARCH ON WASHINGTON

HERMAN FERGUSON Republic of New Africa well, it was a very controlled exercise. We were told what time to come into town, where we could march, where we could not march, the kinds of signs that we could carry, the speakers were told what to say. When you say 'the march on Washington', you...you get the...the perception that people are coming there angry, or they're gonna do something. It was a picnic. The final thing was that we heard Dr. King 's 'I Have a Dream' speech...everybody was mostly clapping and so on. I felt quite sad as I looked at the people because it was an empty dream to me.
