GREEN OA 的應用

本系統整合了台大學術庫以及機構典藏之資料，期待能夠永久典藏台大的學術成果，並透過這個平台打造個人學術品牌，促進交流合作的機會。

學術出版的流程

OA興起原因

📍 傳統學術模式轉變

- ❑ 電子資源比例逐年攀升
- ❑ 網際網路蓬勃發展，學術傳播模式改變
- ❑ 跨域研究盛行，強調資訊流動及分享

📍 期刊費用攀升

- ❑ 訂購費用逐年上升導致學術界資訊獲取的成本大幅提高
- ❑ 學術圖書館維持學術資源訂購所需預算大幅增加

📍 版權問題

- ❑ 版權規範導致取得不易
- ❑ 營利性學術出版社取得學者著作版權造成學術傳播危機

Journal Impact Factor

數據來源：
Web of Science
JCR

期刊評比指標

• **Journal Impact Factor 期刊影響指數**：用該期刊前兩年發表論文在當年度被引用的次數，除以該期刊前兩年發表論文的總數所得到的值。可用來評估**同一研究領域不同期刊**的相對重要性。

Journal Impact Factor™ is calculated using the following metrics:

Citations in 2020 to items published
in 2018 (1,918) + 2019 (1,746)

3,664

$$\frac{3,664}{232} = 15.793$$

5-Year Journal Impact Factor

期刊評比指標

• **5-Year Impact Factor 五年影響指數**：對於社會科學領域的期刊該指數較能看出其期刊影響力 (需經過較久的時間引用才會達到高峰)

OA資源

- ❑ SCImago Journal Rank
- ❑ 概念源自Google的PageRank演算法
- ❑ 將期刊間的引用給予不同的權重
 - 每個期刊的SJR值來自於引用期刊的SJR值
 - 被SJR值越高的期刊引用，所獲得SJR值越提升
- ❑ 改善Impact Factor只計算引用次數但無法反映個別引用「價值」的缺陷

- ❑ 數值經過正規化(normalized)處理
- ❑ 考量不同學科領域的引用情形來比較不同學科領域期刊的引用影響
- ❑ 改善Impact Factor只計算引用次數但無法進行跨領域比較的限制

客觀因素

- 期刊閱眾讀者
- 期刊收錄主題
- 文章類型/文長限制
- 文章刊登出版時間
- 資助者的要求
 - 需投稿於OA期刊等

期刊品質因素

- 期刊聲望排名
 - 期刊評比指標、期刊分級
- 期刊出版流程
 - 穩定出刊頻率、同儕審查

Title

Surface Plasmon Excited on Imprintable Thin-Film Metallic Glasses for Surface-Enhanced Raman Scattering Applications

Abstract

Metallic glasses (MGs) are a class of amorphous alloys in contrast with crystalline metals and provide a challenge of engineering applications for unique structure and properties. However, plasmonic applications remain a virgin area for MGs. In this work, we discovered that certain compositions of gold-based MGs possessed negative dielectric constants and could be used as plasmonic materials. Furthermore, with a low glass-transition temperature of gold-based thin-film MGs (TFMGs), we were able to fabricate large dimensions of nanostructures using an inexpensive thermal imprint method in air instead of other costly lithography methods.

Metallic glasses (MGs) are a class of amorphous alloys in contrast with crystalline metals and provide a challenge of engineering applications for unique structure and properties. However, plasmonic applications remain a virgin area for MGs. In this work, we discovered that certain compositions of gold-based MGs possessed negative dielectric constants and could be used as plasmonic materials. Furthermore, with a low glass-transition temperature of gold-based thin-film MGs (TFMGs), we were able to fabricate large dimensions of nanostructures using an inexpensive thermal imprint method in air instead of other costly lithography methods. We performed both measurements and simulations to demonstrate that our designed nanostructures were suitable for surface-enhanced Raman scattering (SERS) applications. In addition, in the absence of grain boundaries in amorphous TFMGs, damping due to increased scattering at grain boundaries does not occur, and SERS could be improved. Also, compared to regular SERS substrates of textured Si with deposited Au films, imprinted Au-based TFMGs provided complete coverage of Si underneath, and the vibrational signal of Si lattice would not show in Raman spectra to possibly overlap signals of analyte and decrease the accuracy of sensing. Our results suggested new avenues for applying a low-cost and high-throughput method on TFMGs to fabricate large dimensions of substrates for plasmonic applications.

Impact

Authors choose a particular journal to submit to for a variety of reasons; one of the most important is the quality or impact of the journal. Journal Insights determines impact using several different metrics, all of which are statistically sound, and provide authors with valuable information to support their selection. You can also use text-based Elsevier JournalFinder, helping you to find journals that could be best suited for publishing your scientific article: <http://journalfinder.elsevier.com/>

Speed

We know how important speed of publication is to authors considering where to publish, especially in fast moving research areas. These speed metrics (if available in Journal Insights for this title) are displayed: - The average number of weeks it takes for an article to be reviewed - The average number of weeks it takes for an article to reach key publication points in the production process

Metallic glasses (MGs) are a class of amorphous materials with unique structure and properties. However, plasmonic applications remain a virgin area for MGs. In this work, we discovered that certain compositions of gold-based MGs possessed negative dielectric constants and could be used as plasmonic materials. Furthermore, with a low glass-transition temperature of gold-based thin-film MGs (TFMGs), we were able to fabricate large dimensions of nanostructures using an inexpensive thermal imprint method in air instead of other costly lithography methods. We performed both measurements and simulations to demonstrate that our designed nanostructures were suitable for surface-enhanced Raman scattering (SERS) applications. In addition, in the absence of grain boundaries in amorphous TFMGs, damping due to increased scattering at grain boundaries does not occur, and SERS could be improved. Also, compared to regular SERS substrates of textured Si with deposited Au films, imprinted Au-based TFMGs provided complete coverage of Si underneath, and the vibrational signal of Si lattice would not show in Raman spectra to possibly overlap signals of analyte and decrease the accuracy of sensing. Our results suggested new avenues for applying a low-cost and high-throughput method on TFMGs to fabricate large dimensions of substrates for plasmonic applications

Title

Surface Plasmon Excited on Imprintable Thin-Film Metallic Glasses for Surface-Enhanced Raman Scattering Applications

Abstract

Metallic glasses (MGs) are a class of amorphous alloys in contrast with crystalline metals and provide a challenge of engineering applications for unique structure and properties. However, plasmonic applications remain a virgin area for MGs. In this work, we discovered that certain compositions of gold-based MGs possessed negative dielectric constants and could be used as plasmonic materials. Furthermore, with a low glass-transition temperature of gold-based thin-film MGs (TFMGs), we were able to fabricate large dimensions of nanostructures using an inexpensive thermal imprint method in air instead of other costly lithography methods.

掠奪型期刊

什麼是掠奪型出版

掠奪？學術詐騙？

- 因OA的興起，許多期刊提供「作者付費」投稿的模式，遂有不肖業者嗅到商機，藉由OA期刊為作者付費之由邀稿，實則無正統審查機制，且快速刊登，收取高額文章處理費，期刊卻無學術價值

天下雜誌引爆

22個疑似掠奪性出版集團

透過國際調查記者聯盟 (ICIJ) 的平台，德國公廣集團成員北德廣播電台發起「偽科學工廠」的跨國報導，德國、法國、美國、奧地利、挪威、斯洛伐克、印度、韓國等8國記者串聯接力，共同調查22個疑似掠奪性出版集團。

學術詐騙樣態

- 收到不明期刊的邀請信，你會怎麼做？
- 寫好的論文，到底該投到哪本期刊？
- 你確定自己的研究心血，是投到正規的期刊嗎？

掠奪性期刊的慣用手法

多數研究者都會收到來自期刊或學術出版商的邀稿信件，但到底該如何判斷它們是不是所謂的低品質「掠奪性期刊」呢？

以下是一些掠奪性期刊的慣用手法，可作為研究者在投稿時的參考：

- **內容**
 - 收錄文章的領域異常寬廣
 - 期刊名與收錄文章的領域不太一致
 - 奇怪而且不低的 impact factor
 - 期刊所屬領域和收件者本身的領域毫無關連
 - 特別強調自己被收錄在某些著名的學術資料庫
 - 期刊名與某一本正規期刊名很像，或特別冠上 International 字樣
- **收費**
 - 保證快速審查及刊登
 - 在論文處理的過程中，以各種名目向作者收費
 - 沒有清楚列出論文處理費用（article processing charges, APCs）
- **出版商**
 - 沒有提供主編的姓名，或提供假的主編資訊
 - 沒有列出期刊或出版商辦公室的聯絡方式
 - 期刊出版商的名稱通常有 United State (American)、Canada、Britain (British) 等字樣，但其實根本不是在這些國家合法註冊的出版商

❑ 欺騙手法

- 採用相近期刊名
- 捏造期刊IF值
- 號稱有同儕審核(Peer Review)
- 聲稱被知名資料庫收錄
- 頻繁徵稿

❑ 索取高額APC費用

❑ 文章審稿/出版時程異常

Then simply enter the publisher's name or its URL in the search box above. If the journal does not have a publisher use the [Standalone Journals](#) list. All journals published by a predatory publisher are potentially predatory unless stated otherwise.

Original list

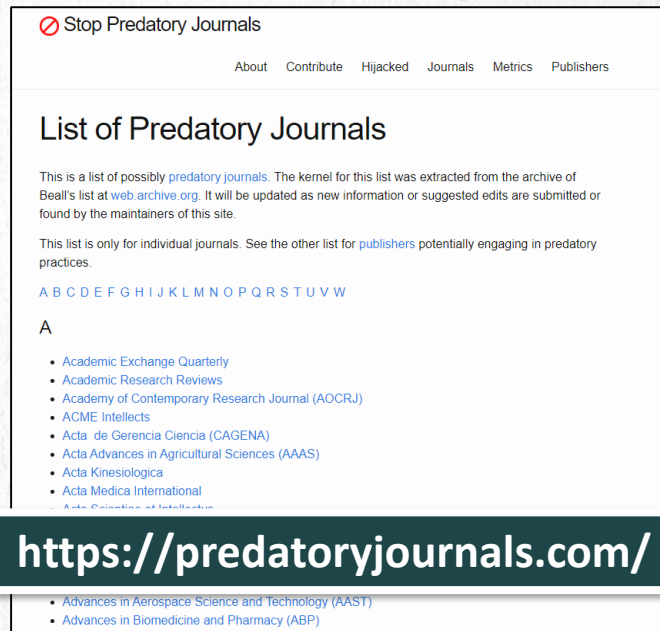

This is an archived version of the Beall's list – a list of potential predatory publishers created by a librarian Jeffrey Beall. We will only update links and add notes to this list.

□ Stop Predatory Journals : 查詢掠奪型期刊及出版者

The screenshot shows the homepage of Stop Predatory Journals. At the top, it says "Stop Predatory Journals" with a red circle and slash icon. Below this is a navigation bar with links: About, Contribute, Hijacked, Journals, Metrics, and Publishers. The main content area is titled "List of Predatory Journals". It contains a paragraph explaining that this is a list of possibly predatory journals, with the kernel extracted from the archive of Beall's list at web.archive.org. It also mentions that the list will be updated as new information or suggested edits are submitted or found by the maintainers of this site. Below this is another paragraph stating that the list is only for individual journals and that there is another list for publishers potentially engaging in predatory practices. A list of letters (A through W) is provided for navigation. Under the letter 'A', a list of journals is shown: Academic Exchange Quarterly, Academic Research Reviews, Academy of Contemporary Research Journal (AOCRJ), ACME Intellects, Acta de Gerencia Ciencia (CAGENA), Acta Advances in Agricultural Sciences (AAS), Acta Kinesiologica, and Acta Medica International. At the bottom, there is a large dark green box with the URL "https://predatoryjournals.com/" in white text.
