%X 在新冠肺炎疫情背景下，針對自動檢測人臉是否規範佩戴口罩的問題，本文提出了一種基于HSV+HOG特征和SVM的人臉口罩檢測算法。首先使用RetinaFace人臉檢測算法檢測出人臉和五個特征點坐標，在人臉上使用特征點定位到口鼻區域，提取該區域的HSV+HOG特征并使用SVM進行訓練，實現對有無佩戴口罩的檢測；然後使用RetinaFace把檢測目標定位到人臉的鼻尖區域，使用YCrCb橢圓膚色模型檢測鼻尖區域皮膚的暴露情況，根據實驗結果找到最佳分類閾值來判斷佩戴是否規範。實驗表明，口罩佩戴檢測準確率可達97.9%，...

Supplementary table 1 | Equations describing the 'Likely water' cluster hull and cluster overlaps in the multidimensional feature-space.

These equations describe the 'Likely water' cluster in the multidimensional feature-space. By definition, part of this cluster contain pixels that are not water, and request additional processing steps to be properly assigned. The method section provides details about the usages of this equations within the expert system classifier.

The relationship between sleep quality and fibromyalgia symptoms

A. Andrade, G. T. Vilarino, S. M. Sieczkowska, D. R. Coimbra, G. G. Bevilacqua and R. D. K. Steffens

Journal of Health Psychology 2020 Vol. 25 Issue 9 Pages 1176-1186

Accession Number: WOS:000553450000003
DOI: 10.1177/1359105317751615

This study investigated the relationship between sleep quality and fibromyalgia symptoms in 326 patients. The Pittsburgh Sleep Quality Index was used to assess the presence of sleep disorders. Multivariate analysis of variance was performed to determine the influence of fibromyalgia symptoms on sleep quality. The prevalence of sleep disorders was 92.9 percent. Patients reported generalized pain (88.3%), memory failure (78.5%), moodiness (59%), excessive anxiety (77.5%), and concentration difficulties (69.1%). Patients with more symptoms reported poor sleep quality ($p < .05$; $d = .74$), and the total Pittsburgh Sleep Quality Index score correlated with the number of symptoms ($p < .01$). Sleep quality has an important association with fibromyalgia symptoms.

Abstract
Background: Although sleep hygiene education represents a promising approach for patients with poor sleep quality, little research has been devoted in understanding the sleep hygiene behavior and knowledge of working women. Purpose: The purpose of this study was to investigate the efficacy of a short-term sleep hygiene education program on working women with poor sleep quality.

Pittsburgh Sleep Quality Index (PSQI)

Nursing

Background: Although sleep hygiene education represents a promising approach for patients with poor sleep quality, little research has been devoted in understanding the sleep hygiene behavior and knowledge of working women. Purpose: The purpose of this study was to investigate the efficacy of a short-term sleep hygiene education program on working women with poor sleep quality. Methods: This pilot study was a prospective and an exploratory intervention study. The intervention was

This study investigated the relationship between sleep quality and fibromyalgia symptoms in 326 patients. The Pittsburgh Sleep Quality Index was used to assess the presence of sleep disorders. Multivariate analysis of variance was performed to determine the influence of fibromyalgia symptoms on sleep quality. The prevalence of sleep disorders was 92.9 percent. Patients reported generalized pain (88.3%), memory failure (78.5%), moodiness (59%), excessive anxiety (77.5%), and concentration difficulties (69.1%). Patients with more symptoms reported poor sleep quality (p < .05;d = .74), and the total Pittsburgh Sleep Quality Index score correlated with the number of symptoms (p < .01). Sleep quality has an important association with fibromyalgia symptoms.

Introduction

Citation-引文(註)

According to traditional Chinese medicine, the pericardial meridian is associated with the pain or fullness in the chest, palpitations, depression, restlessness, manic or depressive disorders, nausea or vomiting, hiccups, gastric pain, and distension in the upper abdomen (Bai and Baron, 2001). Since the parasympathetic modulation of both heart and gut is largely mediated by the vagus nerve, and since vagal stimulation of the gut can result in increased peristalsis while the vagal stimulation of the heart can result in decreased heart rate (Guyton and Hall, 1996), it is speculated that to some extent the pericardium meridian might be associated with the autonomic nervous modulation of the subject.

Acupuncture or acupressure at the Neiguan (P6) point, the most frequently used acupoint in the pericardium meridian, has been shown to lessen nausea and vomiting (Dundee *et al.*, 1987, 1988, 1989a and b; Ho *et al.*, 1989; De Aloysio and Penacchioni, 1992; Belluomini *et al.*, 1994; Fan *et al.*, 1997; Harmon *et al.*, 2000). Because nausea and vomiting are also related to autonomic nervous activity (Morrow *et al.*, 1992; Morrow *et al.*, 1999), we speculated that the autonomic nervous activity might be changed when acupuncture at the P6 point was performed.

Heart rate variability analysis is a useful non-invasive method for the assessment of autonomic nervous modulation of heart rate. Some diseases are associated with vagal modulation, and the restoration of vagal modulation is associated with improvement

Fears of second coronavirus outbreak hit global shares

Chapter 1

Share prices had gained in recent weeks amid hopes that the economy would rebound as authorities loosened restrictions put in place to try to slow the spread of the virus.(Bagheri et al., 2021; Silva et al., 2020)

Last week's surprise report showing US employers had restarted hiring in May helped to push the tech-heavy Nasdaq index to new highs(Haibo et al., 2020; Sharma et al., 2020).

But the recovery remains tentative. On Thursday, the US Labor Department reported that another 1.5 million people had filed new unemployment claims last week. More than 30 million continue to collect the benefits, it said.

摘要

BackgroundAlthough people of all ages are susceptible to the novel coronavirus infection, which is presently named "Coronavirus Disease 2019" (COVID-19), there has been relatively few cases reported among children. Therefore, it is necessary to understand the clinical characteristics of COVID-19 in children and the differences from adults. Case presentationWe report one pediatric case of COVID-19. A 14-month-old boy was admitted to the hospital with a symptom of fever, and was diagnosed with a mild form of COVID-19. The child's mother and grandmother also tested positive for SARS-CoV-2 RNA. However, the lymphocyte counts were normal. The chest computed tomography (CT) revealed scattered ground glass opacities in the right lower lobe close to the pleura and resorption after the treatment. The patient continued to test positive for SARS-CoV-2 RNA in the nasopharyngeal swabs and stool at 17days after the disappearance of symptoms. ConclusionThe present pediatric case of COVID-19 was acquired through household transmission, and the symptoms were mild. Lymphocyte counts did not significantly decrease. The RNA of SARS-CoV-2 in stool and nasopharyngeal swabs remained positive for an extended period of time after the disappearance of symptoms. This suggests that attention should be given to the potential contagiousness of pediatric COVID-19 cases after clinical recovery.

Coronaviruses, seven of which are known to infect humans, can cause a spectrum of clinical presentations ranging from asymptomatic infection to severe illness and death. Four human coronaviruses (hCoVs)-229E, HKU1, NL63 and OC43-circulate globally, commonly infect children and typically cause mild upper respiratory tract infections.
