Search help

Exact match supported for author search results

You can perform an exact author search by enclosing the name (first and/or last) of the author in quotation marks.

Boolean operators

The Boolean operators AND, OR, and NOT can be applied to search terms.

AND (also + or &)

Use AND to search for documents containing two or more terms. For example, the following query returns documents containing both cat and dog:

cat AND dog

The AND operator is applied by default; for example cat AND dog produces the same results as cat dog.

OR

Use OR to search for documents containing at least one of two or more terms. For example, the following query returns documents containing cat, documents containing dog, and documents containing cat and dog:

cat OR dog

NOT

Use NOT to search for documents that do not contain a given term. For example, the following query returns documents containing cat but not containing dog:

cat NOT dog

data References Supplemental Citations Metrics Reprints & Permissions Get access

Twitter Facebook Email

ABSTRACT

This study focuses on how American audiences perceived news coverage during the early days of the Covid-19 pandemic in the United States. Through a survey-experiment of news consumers ($N = 767$) over a three-day period in mid-March 2020, this study shows that citizens had positive attitudes toward their own Covid-19 news sources, but were critical about the news sources others were using to get information about the virus. Data reveal evidence of *presumed media influence*, where audiences believed others' health behaviors were being influenced by pandemic news.

KEYWORDS: Presumed media influence media perceptions perceived news habits third-person effect first-person effect presumed behavior

ABSTRACT

This study focuses on how American audiences perceived news coverage during the early days of the Covid-19 pandemic in the United States. Through a survey-experiment of news consumers ($N = 767$) over a three-day period in mid-March 2020, this study shows that citizens had positive attitudes toward their own Covid-19 news sources, but were critical about the news sources others were using to get information about the virus. Data reveal evidence of *presumed media influence*, where audiences believed others' health behaviors were being influenced by pandemic news.

On March 16, 2020, there were just over 6,400 confirmed cases of the novel Coronavirus (Covid-19) in the United States. Over the course of the next year, the U.S. logged over 30 million cases, with the virus killing nearly 540,000 Americans. The U.S. government officially recognized the threat of the pandemic on March

Manage alerts

Sign up to our email alerts to keep up to date with the things that are important to you.

New content alerts are sent when a new complete issue of your chosen journal(s) is available online.

Latest article alerts are sent when new individual articles from your chosen journal(s) are available online. These alerts are sent on a weekly basis by default, you can change their frequency using the right-hand dropdown options below.

You can add new journals to the above alerts quickly and easily by clicking the *New content alerts* button below the search bar on any journal homepage on Taylor & Francis Online.

Citation alerts are sent whenever a record that you have chosen has been cited. Set up citation alerts by navigating to the Citations tab on your chosen article, and clicking the *Subscribe to citation updates* button.
