Introduction

Citation-引文(註)

According to traditional Chinese medicine, the pericardial meridian is associated with the pain or fullness in the chest, palpitations, depression, restlessness, manic or depressive disorders, nausea or vomiting, hiccup, gastric pain, and distension in the upper abdomen (Bai and Baron, 2001). Since the parasympathetic modulation of both heart and gut is largely mediated by the vagus nerve, and since vagal stimulation of the gut can result in increased peristalsis while the vagal stimulation of the heart can result in decreased heart rate (Guyton and Hall, 1996), it is speculated that to some extent the pericardium meridian might be associated with the autonomic nervous modulation of the subject.

Acupuncture or acupressure at the Neiguan (P6) point, the most frequently used acupoint in the pericardium meridian, has been shown to lessen nausea and vomiting (Dundee *et al.*, 1987, 1988, 1989a and b; Ho *et al.*, 1989; De Aloysio and Penacchioni, 1992; Belluomini *et al.*, 1994; Fan *et al.*, 1997; Harmon *et al.*, 2000). Because nausea and vomiting are also related to autonomic nervous activity (Morrow *et al.*, 1992; Morrow and Penacchioni, 1999), we speculated that the autonomic nervous activity might be changed by the stimulation at the P6 point was performed.

Heart rate variability analysis is a useful non-invasive method for the assessment of autonomic nervous modulation of heart rate. Some diseases are associated with vagal modulation, and the restoration of vagal modulation is associated with the improvement

The background features a dark, deep purple field filled with numerous thin, curved lines of light. These lines, in shades of blue, cyan, and magenta, sweep across the frame from the top-left towards the bottom-right, creating a sense of dynamic movement and depth. A horizontal band of lighter, semi-transparent purple is positioned in the center, serving as a backdrop for the text.

Abstract. Landslides are a ubiquitous hazard in terrestrial environments with slopes, incurring human fatalities in urban settlements, along transport corridors and at sites of rural industry. Assessment of landslide risk requires high-quality landslide databases. Recently, global landslide databases have shown the extent to which landslides impact on society and identified areas most at risk. Previous global analysis has focused on rainfall-triggered landslides over short ~ 5-year observation periods. This paper presents spatiotemporal analysis of a global dataset of fatal non-seismic landslides, covering the period from January 2004 to December 2016. The data show that in total 55 997 people were killed in 4862 distinct landslide events. The spatial distribution of landslides is heterogeneous, with Asia representing the dominant geographical area. There are high levels of interannual

Key Takeaway

Landslides are significantly influenced by both climatic factors and human activities, with a notable increase in fatal landslides linked to construction, illegal mining, and hill cutting from 2004 to 2016.

Additional topics discussed in the document are:

- Impact of climate change on landslide frequency
- Human activities contributing to landslide risks
- Regional variations in landslide occurrences

Here we report the identification and characterization of a new coronavirus (2019-nCoV), which caused an epidemic of acute respiratory syndrome in humans in Wuhan, China. The epidemic, which started on 12 December 2019, had caused 2,794 laboratory-confirmed infections including 80 deaths by 26 January 2020(1). Full-length genome sequences were obtained from five patients at an early stage of the outbreak{Prelaj, A. et al., 2024; Zuo, X. et al., 2025}.

Zhou, 2020 #33 Summary Edit PDF

Zhou-2020-A-pneumonia-outbreak-associated-wit.pdf

2_點擊 PDF 中的雙引號圖示

Fig. 1 | Genome characterization of 2019-nCoV. a, Next-generation sequencing of BALF from patient ICU06. b, Genomic organization of 2019-nCoV WIV04. M, membrane. c, Similarity plot based on the full-length genome sequence of 2019-nCoV WIV04. Full-length genome sequences of SARS-CoV BJ01, bat SARSr-CoV WIV1, bat coronavirus RaTG13 and ZC45 were used as reference sequences. d, Phylogenetic tree based on

hepatitis virus; PEDV, porcine epidemic diarrhoea virus; TGEV, porcine transmissible gastroenteritis virus. The scale bars represent 0.1 substitutions per nucleotide position. Descriptions of the settings and software that was used are included in the Methods.

WIV07) (GISAID accession numbers EPI_ISL_402127–402130) that were more than 99.9% identical to each other were subsequently obtained from four additional patients using next-generation sequencing and PCR (Extended Data Table 2).

The virus genome consists of six major open-reading frames (ORFs) that are common to coronaviruses and a number of other accessory genes (Fig. 1b). Further analysis indicates that some of the 2019-nCoV genes shared less than 80% nucleotide sequence identity to SARS-CoV. However, the amino acid sequences of the seven conserved replicase domains in ORF1ab that were used for CoV species classification were 94.4% identical between 2019-nCoV and SARS-CoV, suggesting that the two viruses belong to the same species. SARSr-CoV

We then found that a short region of RNA-dependent RNA polymerase (RdRp) from a bat coronavirus (BatCoV RaTG13)—which was previously detected in *Rhinolophus affinis* from Yunnan province—showed high sequence identity to 2019-nCoV. We carried out full-length sequencing of this RNA sample (GISAID accession number EPI_ISL_402130). Sequencing analysis showed that 2019-nCoV was highly similar through

identity to all previously described SARSr-CoVs, except for a 93.1% nucleotide identity to RaTG13 (Extended Data Table 3). The S genes of 2019-nCoV and RaTG13 are longer than other SARSr-CoVs. The major differences in the sequence of the S gene of 2019-nCoV are the three short insertions in the N-terminal domain as well as changes in four out of five of the key residues in the receptor-binding motif compared with the sequence of SARS-CoV (Extended Data Fig. 3). Whether the insertions in the N-terminal domain of the S protein of 2019-nCoV confer sialic-acid-binding activity as it does in MERS-CoV needs to be further studied. The close phylogenetic relationship to RaTG13 provides evidence that 2019-nCoV may have originated in bats.

We rapidly developed a qPCR-based detection method on the basis of the sequence of the receptor-binding domain of the S gene, which was the most variable region of the genome (Fig. 1c). Our data show that the primers could differentiate 2019-nCoV from all other human coronaviruses including bat SARSr-CoV WIV1, which shares 95% identity with SARS-CoV (Extended Data Fig. 4a, b). Of the samples obtained from 10 patients, we found that six BALF and five oral swab samples

1_選取想要引用的PDF 文字段落

RdRp and spike (S) showed that—for all sequences—RaTG13 is the closest relative of 2019-nCoV and they form a distinct lineage from other SARSr-CoVs (Fig. 1d and Extended Data Fig. 2). The receptor-binding spike protein encoded by the S gene was highly divergent from other CoVs (Extended Data Fig. 2), with less than 75% nucleotide sequence

envelope (E) genes are used for the routine detection of 2019-nCoV. On the basis of these findings, we propose that the disease could be transmitted by airborne transmission, although we cannot rule out other possible routes of transmission, as further investigation, including more patients, is required.

Abstract

Background: Artificial intelligence technologies are one of the most important technologies of today. Developments in artificial intelligence technologies have widespread and increased the use of artificial intelligence in many areas. The field of health is also one of the areas where artificial intelligence technologies are widely used. For this reason, it is considered important that healthcare professionals be prepared for artificial intelligence and do not experience problems while training them. In this study, midwife and nurse candidates, as future healthcare professionals, were discussed. Aim: This study aims to examine the effect of the artificial intelligence readiness on the artificial intelligence anxiety and the effect of artificial intelligence characteristic variables (artificial intelligence knowledge, daily life, occupational threat, artificial intelligence trust) on the medical artificial intelligence readiness and artificial intelligence anxiety of students. Methods: This study was planned and carried out as a relational survey study, which is a quantitative research. A total of 480 students, consisting of 240 nursing and 240 midwifery students, were included in this study. SPSS 26.0 and

探索人工智慧素養、情感、擬人化如何影響用戶對人工智慧工具的使用意圖之研究：以ChatGPT為例

張仁杰

企業管理學系碩士班

2024

Pages 95

Links

<https://hdl.handle.net/11296/zxtk69>

Abstract

近年來，伴隨著ChatGPT的問世以及人工智慧科技的快速發展，有許多企業紛紛導入人工智慧工具用以解決商業問題，在我們的生活中也出現眾多的人工智慧產品。許多的公司及研發者想要搭上這波人工智慧浪潮，開發出各領域的人工智慧產品，期盼能受到用戶青睞。然而，要讓陌生用戶願意使用新科技、新產品絕非易事。本研究以用戶角度切入，探索使用者對於人工智慧工具之意識、用法、評估、倫理等能力，而這些能力統稱為「人工智慧素養」，除此之外，人工智慧工具之擬人化、情感是否會影響使用者對其之態度，進而影響使用者之使用意圖，皆為本研究之研究問題。本文旨在探討人工智慧素養、情感、擬人化是如何影響用戶對人工智慧工具的使用意圖的。本研究以ChatGPT為基礎，以線上問卷蒐集資料方式進行實證研究，共回收470份問卷。研究結果顯示人工智慧素養用法、人工智慧素養評估、擬人化、情感會正向影響使用者對人工智慧工具之績效預期、努力期望；而績效預期、努力期望、擬人化會影響使用者對人工智慧工具的態度，且態度最終會影響使用者對人工智慧工具之使用意圖，研究結果可供產品開發者及企業管理者作為參考。

In recent years, with the advent of ChatGPT and the rapid development of arti-ficial intelligence (AI) technology, many companies have embraced AI tools to address business challenges. Consequently,

Artificial Intelligence Techniques: Analysis, Application, and Outcome in Dentistry-A Systematic Review

Ahmed, N., Abbasi, M.S., Zuberi, F., Qamar, W., Halim, M.S.B., Maqsood, A. & Alam, M.K.

Biomed Res Int

2021

Pages 9751564

DOI: 10.1155/2021/9751564

Abstract

OBJECTIVE: The objective of this systematic review was to investigate the quality and outcome of studies into artificial intelligence techniques, analysis, and effect in dentistry. MATERIALS AND METHODS: Using the MeSH keywords: artificial intelligence (AI), dentistry, AI in dentistry, neural networks and dentistry, machine learning, AI dental imaging, and AI treatment recommendations and dentistry. Two investigators performed an electronic search in 5 databases: PubMed/MEDLINE (National Library of Medicine), Scopus (Elsevier), ScienceDirect databases (Elsevier), Web of Science (Clarivate Analytics), and the Cochrane Collaboration (Wiley). The English language articles reporting on AI in different dental specialties were screened for eligibility. Thirty-two full-text articles were selected and systematically analyzed according to a predefined inclusion criterion. These articles were analyzed as per a specific research question, and the relevant data based on article general characteristics, study and control groups, assessment methods, outcomes, and quality assessment were extracted. RESULTS: The initial search identified 175 articles related to AI in dentistry based on the title and abstracts. The full text of 38 articles was assessed for eligibility to exclude studies not fulfilling the inclusion criteria. Six articles not related

我國工業機器人技術現狀與產業化發展戰略

王田苗 & 陶永

機械工程學報

2014

Issue 09

Pages 1-13

Abstract

隨著工業機器人的快速發展,其在汽車制造、機械加工、焊接、上下料、磨削拋光、搬運碼垛、裝配、噴塗等作業中得到越來越多的應用。結合在機器人領域的相關工作,在分析國內外關於工業機器人發展現狀的基礎上,就工業機器人目前涉及的靈巧操作、自主導航、環境感知、人機交互與安全性等前沿技術的研究做簡要的綜述。提出我國工業機器人產業發展的若干思考和建議,希望能夠在把握國內外工業機器人前沿技術發展動態的同時,為發展我國工業機器人技術與產業提供相關戰略思考與建議。

智能向善：人工智能價值對齊的人文建構

劉飛 & 吳輝

成都理工大學學報(社會科學版)

Pages 1-12

Abstract

人工智能價值對齊，是人類有效掌控人工智能技術的關鍵，更是確保人工智能推動人類社會良性發展的重要保障。在維護人類主體性、踐行人類倫理道德方面，它具有顯著的時代價值，為未來智能技術向善發展樹立了標桿。然而，實現人工智能價值對齊面臨諸多現實挑戰。技術體系尚不完善，算法黑箱威脅人身財產安全；人類對倫理道德的認可度差異大；技術加速異化人類，資本回報壓力致使泄露用戶數據隱私常态化。為突破這些困境，可從多方面進行人文建構：健全人工智能技術體系，細化算...

Abstract

Background Vaccines are needed to prevent coronavirus disease 2019 (Covid-19) and to protect persons who are at high risk for complications. The mRNA-1273 vaccine is a lipid nanoparticle-encapsulated mRNA-based vaccine that encodes the prefusion stabilized full-length spike protein of the severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2), the virus that causes Covid-19. Methods This phase 3...

Chatbots for future docs: exploring medical students' attitudes and knowledge towards artificial intelligence and medical chatbots

Julia-Astrid Moldt , Teresa Festl-Wietek , Amir Madany Mamlouk , Kay Nieselt , Wolfgang Fuhr and Anne Herrmann-Werner

^aUniversity of Tuebingen, Tuebingen, Germany; ^bInstitute for Neuro- and Bioinformatics, University of Luebeck, Luebeck, Germany; ^cInstitute for Bioinformatics and Medical Informatics, University of Tuebingen, Germany; ^dDepartment of Internal Medicine VV Psychosomatic Medicine and Psychotherapy, University Hospital Tuebingen, Tuebingen, Germany

ABSTRACT

Artificial intelligence (AI) in medicine and digital assistance systems such as chatbots will play an increasingly important role in future doctor – patient communication. To benefit from the potential of this technical innovation and ensure optimal patient care, future physicians should be equipped with the appropriate skills. Accordingly, a suitable place for the management and adaptation of digital assistance systems must be found in the medical education curriculum. To determine the existing levels of knowledge of medical students about AI chatbots in particular in the healthcare setting, this study surveyed medical students of the University of Luebeck and the University Hospital of Tuebingen. Using standardized quantitative questionnaires and qualitative analysis of group discussions, the attitudes of medical students toward AI and chatbots in medicine were investigated. From this, relevant requirements for the future integration of AI into the medical curriculum could be identified. The aim was to establish a basic understanding of the opportunities, limitations, and risks, as well as potential areas of application of the technology. The participants (N=12) were able to develop an understanding of how AI and chatbots will affect their future daily work. Although basic attitudes toward the use of AI were positive, the students also expressed concerns. There were high levels of agreement regarding the use of AI in administrative settings (83.3%) and research with health-related data (91.7%). However, participants expressed concerns that data protection may be insufficiently guaranteed (33.3%) and that they might be increasingly monitored at work in the future (58.3%). The evaluations indicated that future physicians want to engage more intensively with AI in medicine. In view of future developments, AI and data competencies should be taught in a structured way during the medical curriculum and integrated into curricular teaching.

Introduction

The healthcare system is undergoing a digital transformation, and artificial intelligence (AI) will play a significant role in defining everyday medical practice [1]. The location- and time-independence of digital applications have created new opportunities for medicine and health communication that are also changing the doctor – patient relationship [2]. The growing importance of e-health applications, wearables and AI applications such as chatbots can empower patients to collect their own health data [3,4].

Furthermore, the digital networking of patients, hospitals, physicians and other healthcare services is enabling a shift from a physician-centric approach to more patient-centered treatment [5]. To exploit the potential of this technical innovation and ensure optimized care for patients, future doctors must be equipped with the appropriate skills [6]. Future physicians will not only need to be flexible in responding to different healthcare contexts but will also require

the competence to adequately deal with procedures and applications involving AI and the accompanying big data [7]. The growing complexity of medicine and increasing specialization of knowledge require the integration of AI as well as the interaction with digital assistance systems already in the curriculum of medical studies [8–10]. According to current literature, although AI competencies are essential for medical practice, they are not comprehensively taught in medical education [7,11,12].

Medical curriculum in Germany

A look at the national competence-based learning objectives catalog for medicine (NKLM) [13] shows that the teaching of competencies in the area of medical apps and artificial intelligence is still under-represented. The national competence-based learning objectives catalog for medicine is currently being further developed on the basis of the 'Master Plan

Highly compressible 3D periodic graphene aerogel microlattices

Cheng Zhu¹, T. Yong-Jin Han¹, Eric B. Duoss¹, Alexandra M. Golobic¹, Joshua D. Kuntz¹, Christopher M. Spadaccini¹ & Marcus A. Worsley¹

Graphene is a two-dimensional material that offers a unique combination of low density, exceptional mechanical properties, large surface area and excellent electrical conductivity. Recent progress has produced bulk 3D assemblies of graphene, such as graphene aerogels, but they possess purely stochastic porous networks, which limit their performance compared with the potential of an engineered architecture. Here we report the fabrication of periodic graphene aerogel microlattices, possessing an engineered architecture via a 3D printing technique known as direct ink writing. The 3D printed graphene aerogels are lightweight, highly conductive and exhibit supercompressibility (up to 90% compressive strain). Moreover, the Young's moduli of the 3D printed graphene aerogels show an order of magnitude improvement over bulk graphene materials with comparable geometric density and possess large surface areas. Adapting the 3D printing technique to graphene aerogels realizes the possibility of fabricating a myriad of complex aerogel architectures for a broad range of applications.

Abstract

- Background Garlic is alleged to have antimicrobial and antiviral properties that relieve the common cold, among other beneficial effects. There is widespread usage of garlic supplements. The common cold is associated with significant morbidity and economic consequences. On average, children have six to eight colds per year and adults have two to four. Objectives To determine whether garlic (Allium sativum) is effective for the prevention or treatment of the common cold, when compared to placebo, no treatment or other treatments. Search methods We searched CENTRAL (2014, Issue 7), OLDMEDLINE (1950 to 1965), MEDLINE (January 1966 to July week 5, 2014), EMBASE (1974 to August 2014) and AMED (1985 to August 2014). Selection criteria Randomised controlled trials of common cold prevention and treatment comparing garlic with placebo, no treatment or standard treatment. Data collection

Abstract

EndNote 2025推出了旨在優化研究和寫作過程的全新工具，以協助研究人員輕鬆應對耗時任務，更快達成研究目標。新版解決方案的發佈標榜著人工智慧功能首次內建到EndNote。30多年來，研究人員始終依賴EndNote簡化其研究和寫作過程。隨著EndNote 2025的推出，更先進的文獻管理工具嶄新問世，一系列高階人工智慧功能也包含其中，這些工具將進一步提升管理性任務的效率，讓研究人員能夠專注於自己的科研構想。EndNote 2025是值得信賴的解決方案，能說明使用者保證論文質量和準確性，還能讓研究和寫作過程的各個階段更加高效省時、井然有序。

Abstract

Since the outbreak of severe acute respiratory syndrome (SARS) 18 years ago, a large number of SARS-related coronaviruses (SARSr-CoVs) have been discovered in their natural reservoir host, bats(1-4). Previous studies have shown that some bat SARSr-CoVs have the potential to infect humans(5-7). Here we report the identification and characterization of a new coronavirus (2019-nCoV), which caused an epidemic of acute respiratory syndrome in humans in Wuhan, China. The

Abstract

Acute kidney injury (AKI) is one of the most severe complications of SARS-CoV-2 infection. In a retrospective study, we aimed to describe the influence of COVID-19-related factors on the severity, outcome and timing of AKI in 268 patients admitted in two large COVID-19-designated university hospitals over a period of 6 months. In the univariate analysis, there was a significant relationship between KDIGO stage and the extension of COVID-19 pneumonia on computed tomography (CT), need for oxygen supplementation, serum levels of ferritin,

Abstract

Published evidence supports significant heterogeneity of immune responses among individuals infected with or vaccinated against SARS-CoV-2. This highlights the need for in-depth investigation of the implicated processes toward refined understanding and improved management of COVID-19. The main objective of the present study was to investigate the dynamics of B cell

Abstract

Background: Artificial intelligence technologies are one of the most important technologies of today. Developments in artificial intelligence technologies have widespread and increased the use of artificial intelligence in many areas. The field of health is also one of the areas where artificial intelligence technologies are widely used. For this reason, it is considered important that healthcare professionals be prepared for artificial intelligence and do not experience problems while training them. In this study, midwife and nurse candidates, as

Abstract

- Background The common cold is a spontaneously remitting infection of the upper respiratory tract, characterised by a runny nose, nasal congestion, sneezing, cough, malaise, sore throat, and fever (usually < 37.8 °C). Whilst the common cold is generally not harmful, it is a cause of economic burden due to school and work absenteeism. In the United States, economic loss due to the common cold is estimated at more than USD 40 billion per year, including an estimate of 70 million workdays missed by employees, 189 million school days missed by children, and 126 million workdays missed by parents caring for children with a cold. Additionally, data from Europe show that the total cost per episode may be up to EUR 1102. There is also a large expenditure due to

Abstract

Beginning in early 2021, unique and highly divergent lineages of SARS-CoV-2 were sporadically found in wastewater sewersheds using a sequencing strategy focused on amplifying the most rapidly evolving region of SARS-CoV-2, the receptor binding domain (RBD). Because these RBD sequences did not match known circulating strains and their source was not known, we termed them "cryptic lineages". To date, more than 20 cryptic lineages have been identified using the RBD-focused sequencing strategy. Here, we identified and

張仁杰, 2024 #12 Summary Edit PDF

探索人工智慧素養、情感、擬人化如何影響用戶對人工智慧工具的使用意圖之研究：以ChatGPT為例

張仁杰

企業管理學系碩士班

2024

Pages 95

Links

<https://hdl.handle.net/11296/zxtk69>

Abstract

近年來，伴隨著ChatGPT的問世以及人工智慧科技的快速發展，有許多企業紛紛導入人工智慧工具用以解決商業問題，在我們的生活中也出現眾多的人工智慧產品。許多的公司及研發者想要搭上這波人工智慧浪潮，開發出各領域的人工智慧產品，期盼能受到用戶青睞。然而，要讓陌生用戶願意使用新科技、新產品絕非易事。本研究以用戶角度切入，探索使用者對於人工智慧工具之意識、用法、評估、倫理等能力，而這些能力統稱為「人工智慧素養」，除此之外，人工智慧工具之擬人化、情感是否會影響使用者對其之態度，進而影響使用者之使用意圖，皆為本研究之研究問題。本文旨在探討人工智慧素養、情感、擬人化是如何影響用戶對人工智慧工具的使用意圖的。本研究以ChatGPT為基礎，以線上問卷蒐集資料方式進行實證研究，共回收470份問卷。研究結果顯示人工智慧素養用法、人工智慧素養評估、擬人化、情感會正向影響使用者對人工智慧工具之績效預期、努

The background of the slide is a dark, deep purple or black, filled with numerous thin, glowing lines of light. These lines are primarily in shades of purple, blue, and a hint of pink, and they appear to be moving or streaking across the frame, creating a sense of dynamic energy and depth. The lines vary in brightness and thickness, some appearing as sharp, bright streaks while others are more diffuse.

How you breathe is like a fingerprint that can identify you

By [Humberto Basilio](#)

Taking a breath

Breathing is deeply connected to the brain. Every inhalation and exhalation is coordinated to supply the oxygen needed for the brain to manage the body's systems (Bagheri et al., 2021; O'Malley, 2022; Salas et al., 2022; Zhou et al., 2020).

To test this, the researchers developed a custom, wearable device that records airflow through each of a person's nostrils.

How you breathe is like a fingerprint that can identify you

By [Humberto Basilio](#)

Taking a breath

Breathing is deeply connected to the brain. Every inhalation and exhalation is coordinated to supply the oxygen needed for the brain to manage the body's systems¹⁻⁴.

To test this, the researchers developed a custom, wearable device that records airflow through each of a person's nostrils^{5,6}.

Suarez, 2025 #45 [Summary](#) Edit PDF

Detecting SARS-CoV-2 cryptic lineages using publicly available whole genome wastewater sequencing data

Suarez, R., Gregory, D.A., Baker, D.A., Rushford, C.A., Hunter, T.L., Minor, N.R., Russ, C.M., Copen, E.E., O'Connor, D.H. & Johnson, M.C.

Abstract

Beginning in early 2021, unique and highly divergent lineages of SARS-CoV-2 are sporadically found in wastewater sewersheds using a sequencing strategy used on amplifying the most rapidly evolving region of SARS-CoV-2, the receptor binding domain (RBD). Because these RBD sequences did not match known circulating strains and their source was not known, we termed them "cryptic lineages". To date, more than 20 cryptic lineages have been identified using the RBD-focused sequencing strategy. Here, we identified and

Totura-2019-Broad-s...navirus-antivir.pdf1.793 MB

Key Takeaway

The development of effective antiviral therapeutics for highly pathogenic coronaviruses like SARS CoV and MERS CoV is hindered by inadequate animal models, limited understanding of viral pathogenesis, and the need for pan coronavirus drug discovery strategies that can address both known and emerging coronaviruses.

Additional topics discussed in the document are:

- Challenges in developing animal models for coronavirus research
- The role of reverse genetics in understanding coronavirus pathogenesis
- The importance of public health measures in controlling coronavirus outbreaks

EndNote Online v.s. EndNote Web

The screenshot shows the EndNote Online interface. On the left, the 'All references' list includes entries by Totura, A. L.; Bavari, S. (Broad-spectrum coronavirus), Ye, H.; Wang, Y.; Zhan... (Characterization of globa...), Zhang, X.; Wu, T.; Zha... (Chinese medicinal herbs), Kirita, K.; Futagami, S... (Combination of artificial), and Hayward, G.; Thomps... (Corticosteroids for the co...). The right pane shows the details for 'Totura, 2019'. It has tabs for 'Summary', 'Edit', and 'File Attachments'. The 'File Attachments' tab is active, showing a PDF file named 'Totura-2019-Broad-s...navirus-antivir.pdf' (1.793 MB) with download and delete icons. A purple box highlights the filename, and a purple arrow points from it down to the EndNote Web interface below.

The screenshot shows the EndNote Web interface. The top bar includes the Clarivate logo and 'EndNote Totura, 2019'. The main content area displays a PDF document titled 'Expert Opinion on Drug Discovery' from Taylor & Francis. The document title 'Broad-spectrum coronavirus antiviral drug discovery' is visible. A purple arrow from the EndNote Online interface points to this section. At the bottom, a blue banner reads 'EndNote Web 可直接線上閱讀PDF 全文'.

The screenshot shows a file manager interface. It lists files with columns for '年份' (Year) and '標題' (Title). Files include 'Reversible Deactivation Radical Polymerization: From Polymer Network Synthesis to Adv Sci (Weinh)' (2021), 'Broad-spectrum coronavirus antiviral drug discovery Expert Opin Drug Discov' (2019), and 'A pneumonia outbreak associated with a new coronavirus of probable bat origin' (2020). A '檔案附件' (File Attachments) window is open, showing a file named 'adv.s.202003701.pdf'. A dark notification box at the bottom left says '近期下載內容' (Recent download content), listing 'Dhingra-2022-Mucoadhesive silver nanoparticle-.pdf' (1,119 KB • 完成) and a link to '顯示所有下載內容' (Show all download content).

Abstract

Acute kidney injury (AKI) is one of the most severe complications of SARS-CoV-2 infection. In a retrospective study, we aimed to describe the influence of COVID-19-related factors on the severity, outcome and timing of AKI in 268 patients admitted in two large COVID-19-designated university hospitals over a period of 6 months. In the univariate analysis, there was a significant relationship between KDIGO stage and the extension of COVID-19 pneumonia on computed tomography (CT), need

Abstract

Abstract

While morphological examination is the most widely used for Aspergillus identification in clinical laboratories, PCR-sequencing and MALDI-TOF MS are emerging technologies in more financially-competent laboratories. However, mycological expertise, molecular biologists and/or expensive equipment are needed for these. Recently, artificial intelligence (AI)

Abstract

Abstract

2020年末，在短短9天時間內發生6起大學生輕生案，引起社會關注大學生的心理狀態。近年來，大學生因為學業表現、人際關係、家庭關係、兩性關係和未來發展等因素感到壓力大，當學生常處於有壓力的情況時，負面情緒逐漸增加，接著陷入憂鬱情緒中，如果沒有適當的排解壓力或是覺察情緒，最終可能使人走上自殺的道路。
本研究為了降低大學生的壓力及憂鬱情緒，使用Python Flask的架構建立Line聊天機器人，經由問答的方式了解使用者的情緒狀態並紀錄，並傳達自我覺察的概念，幫助使用者進行自我覺察情緒，再加上利用音樂紓壓，推薦紓壓音樂及提供歌唱評分的功能，鼓勵使用者進行歌唱活動以排解壓力，降低學生的憂鬱情緒。

Severe acute respiratory syndrome-
related
coronavirus/classification/genetics
SARS-CoV-2
Sequence Homology, Nucleic Acid
Severe Acute Respiratory Syndrome
Vero Cells

Abstract
Since the outbreak of severe acute
respiratory syndrome (SARS) 18 years
ago, a large number of SARS-related
coronaviruses (SARSr-CoVs) have been
discovered in their natural reservoir host,
bats(1-4). Previous studies have shown
that some bat SARSr-CoVs have the
potential to infect humans(5-7). Here we
report the identification and
characterization of a new coronavirus
(2019-nCoV) which caused an epidemic
in humans.

CWYW for Google Docs

EndNote for Google Docs 外掛

若您與一群研究者共同編輯 Word 文件，面對整合文章內容與 EndNote 語法感到複雜時，可試試在 Google Docs 提供的 **EndNote Cite While You Write** 擴充功能，幫助您撰寫與編輯書目引文一氣呵成。

- ※ 需先在 EndNote 21 或 2025 的 EndNote Web 帳號認證啟用
- ※ 語法無法與 Word 文件共用

取得擴充功能

登入

使用擴充功能前，須先以有 EndNote 21 或 2025 權限的 EndNote Online 帳號密碼登入

The login window for EndNote Cite While You Write. It features the EndNote logo (EN) and the title 'EndNote Cite While You Write'. Below the title, it states 'EndNote 2025 or EndNote 21 is required for access'. There are two input fields: 'Email Address' and 'Password'. A 'Sign in' button is located below the password field. At the bottom, there are two links: 'Forgot password?' and 'Don't have EndNote 2025 yet?'.

搜尋並插入引文

The screenshot displays the EndNote CWYW (Cite While You Write) interface integrated with a Google Docs document. The document title is "EndNote CWYW". The main text of the document reads: "Here we report the identification and characterization of a new coronavirus (2019-nCoV), which caused an epidemic of acute respiratory syndrome in humans in Wuhan, China. The epidemic, which started on 12 December 2019, had caused 2,794 laboratory-confirmed infections including 80 deaths by 26 January 2020. Full-length genome sequences were obtained from five patients at an early stage of the outbreak." The word "outbreak" is highlighted with a pink box. A blue callout box with white text is overlaid on the document, stating: "在 Google Docs 文件中，將由標放在欲插入引文的位置，並至擴充功能的 My references 搜尋並以下方 Insert Citation 插入引文". The EndNote sidebar on the right is titled "EndNote Cite While You Write" and includes a "My references" tab, a "Citation builder" section with "2 references selected" (listing "Tsang, C. C. et al., 2025" and "Ye, H. et al., 2025"), a search bar containing "artificial intelligence", and a list of references with checkboxes. Two references are checked: "Automatic identification of clinically important Aspergillus..." and "Characterization of global research trends and prospects...". At the bottom of the sidebar are "Insert Citation" and "Update Citations" buttons.

Here we report the identification and characterization of a new coronavirus (2019-nCoV), which caused an epidemic of acute respiratory syndrome in humans in Wuhan, China. The epidemic, which started in late 2019, has since spread globally, resulting in more than 80 million infections including 80 deaths as of April 2020. The virus has been named 2019-nCoV and is a member of the family Coronaviridae. The genome of the virus is approximately 30,000 nucleotides in length and encodes four open reading frames (ORFs). The ORF1 encodes the nucleocapsid protein (N), the surface glycoprotein (S), the membrane protein (M), and the hemagglutinin-esterase glycoprotein (HE). The ORF2 encodes the spike protein (S), the membrane protein (M), and the hemagglutinin-esterase glycoprotein (HE). The ORF3 encodes the spike protein (S), the membrane protein (M), and the hemagglutinin-esterase glycoprotein (HE). The ORF4 encodes the spike protein (S), the membrane protein (M), and the hemagglutinin-esterase glycoprotein (HE).

Here we report the identification and characterization of a new coronavirus (2019-nCoV), which caused an epidemic of acute respiratory syndrome in humans in Wuhan, China. The epidemic, which started on 12 December 2019, had caused 2,794 laboratory-confirmed infections including 80 deaths by 26 January 2020(1). Full-length genome sequences were obtained from five patients at an early stage of the outbreak{Prelaj, A. et al., 2024; Zuo, X. et al., 2025}.

1 Applications of Generative Adversarial Networks (GANs): An Updated Review

Alqahtani, H; Kavakli-Thorne, M and Kumar, G

Mar 2021 | ARCHIVES OF COMPUTATIONAL METHODS IN ENGINEERING 28 (2) , pp.525-552

Generative adversarial networks (GANs) present a way to learn deep representations without extensively annotated training data. These networks achieve learning through deriving back propagation signals through a competitive process involving a pair of networks. The representations that can be lei ... 顯示更多 ▾

整個 Library 文獻記錄會匯入到新整合 Library 的 Unfiled 類別，但不會同時匯入原 Library 設定的 Group 分類，需自行重新分類文獻。

此方法可直接將原 Library 的文獻一次匯入新整合 Library，但可能要花較多時間整理分類文獻。

使用 Copy References to / Copy 複製文獻

以 Copy References to 或 Ctrl + C 鍵將部分文獻複製到新整合的 Library 中，並到分類到指定的 Group 中。

此方法能較有效率地將文獻匯入新的 Group 中，但一樣要花時間整理分類文獻。

Abstract. Landslides are a ubiquitous hazard in terrestrial environments with slopes, incurring human fatalities in urban settlements, along transport corridors and at sites of rural industry. Assessment of landslide risk requires high-quality landslide databases. Recently, global landslide databases have shown the extent to which landslides impact on society and identified areas most at risk. Previous global analysis has focused on rainfall-triggered landslides over short ~5-year observation periods. This paper presents spatiotemporal analysis of a global dataset of fatal non-seismic landslides, covering the period from January 2004 to December 2016. The data show that in total 55 997 people were killed in 4862 distinct landslide events. The spatial distribution of landslides is heterogeneous, with Asia representing the dominant geographical area. There are high levels of interannual variation in the occurrence of landslides. Although more ac-

pact depends on the number of exposed elements and associated vulnerabilities, the consequences of the im and the intensity of the landslide event (Glade and Cr 2005). A landslide event may include more than one failure triggered by the same phenomenon (e.g. a rainst Interest in quantifying landslide risk has developed sinc attempt by the International Association of Engineering ology (IAEG) Commission on Landslides to compile of worldwide landslide events for the UNESCO annual mary of information on natural disasters in 1971 (UNE 1973). Although incomplete, 5 years of records (1971– recognised that landslides are a significant global ha with ca. 14 % of total casualties from natural hazard ing attributed to slope failure (Varnes and IAEG Commi on Landslides, 1984). Since then, there has been a grc interest in landslide hazard and risk assessment (Wu c
