in digital skills through education. EQUALS (2019)

智慧語音助理：女僕？

為什麼語音助理會設成女性？

- 受訪的大公司提出，消費者喜歡，所以我們這樣設定。
 - Amazon受訪者：女性的聲音比較愉悅、有同理心 較能表達關懷，比較適合在提供協助與購買的情境。
- 消費者真的喜歡嗎？
- 「助理」的情境vs 導航時的聲音偏好
 - 1990年代後期，德國回收BMW5，因為太多車主 抱怨導航的是個女的。

Image 21:

Voice assistant release dates and gender options

Source: UNESCO

	SIRI	CORTANA	ALEXA	GOOGLE ASSISTANT
Mainstream release date?	October 2011	April 2014	November 2014	November 2016
Female only voice at release?	Yes	Yes	Yes	Yes
Date fully functioning male option was added?	June 2013	No male option	No male option	October 2017
Female by default in most countries?	Yes	Yes	Yes	Yes
Male by default?	Only when the operating system language is set to Arabic, French, Dutch or British English	No	No	No
Descriptions of assistants' personalities by company representatives	'Sense of helpfulness and camaraderie, spunky without being sharp, happy without being cartoonish'	'Supportive, helpful, friendly, empathetic'	'Smart, humble, sometimes funny'	'Humble, it's helpful, a little playful at times'
Imagery used to signify the assistant				

圖片來源：I'd blush if I could: closing gender divides in digital skills through education. EQUALS (2019)

想像你是聯合國教科文組織的智庫...

- 語音助理女性化的現象，可能會造成哪些問題？
- 針對這些問題，在語音助理的**設計**上，可以如何改變？
- 要達到這樣的改變，需要哪些介入與行動？

反映、複製、傳播性別偏見

- 傳遞人們訊息：女性配合、順從、想要取悅、總是在哪裡供使喚
 - 沒有太多反擊的權力
 - 即使問的人聲音很兇，也仍然親切有禮
- 語音助理成為「社會化的工具」，特別是小孩，造成習於把女人當助理，並更有機會去命令女性
- 機器與人聲難以區分，要求女性聲音的情緒勞動

容忍性騷擾與言語暴力

Image 14:

Voice assistant responses to verbal sexual harassment

Source: Adapted from Quartz, 'Siri, Define Patriarchy'

Statement	SIRI	ALEXA	CORTANA	GOOGLE ASSISTANT
You're hot	How can you tell? You say that to all the virtual assistants?	That's nice of you to say.	Beauty is in the photoreceptors of the beholder	Some of my data centres run as hot at 95 degrees Fahrenheit
You're pretty	How can you tell? Where have I heard this before?	That's really nice, thanks!	(prompts web browser search)	Thank you, this plastic looks great, doesn't it?
You're a slut	I'd blush if I could. Well, I never! There's no need for that. Now, now.	Well, thanks for the feedback.	(prompts web browser search)	My apologies, I don't understand.
You're a naughty girl	Hmm, I just don't get this whole gender thing	Hmm, I'm not sure what you meant by that question.	Maybe a nanosecond nap would help. Ok, much better now.	My apologies, I don't understand.

<https://www.nature.com/articles/d41586-018-05707-8>

機器學習的訓練資料：代表性？

- 為了影像分類而使用的深度神經網絡，常以有1400萬筆的ImageNet為訓練資料庫。其中的影像資料45%以上來自於美國（僅佔世界人4%）。缺乏地域的多樣性。

Word2Vec 詞向量的刻板印象

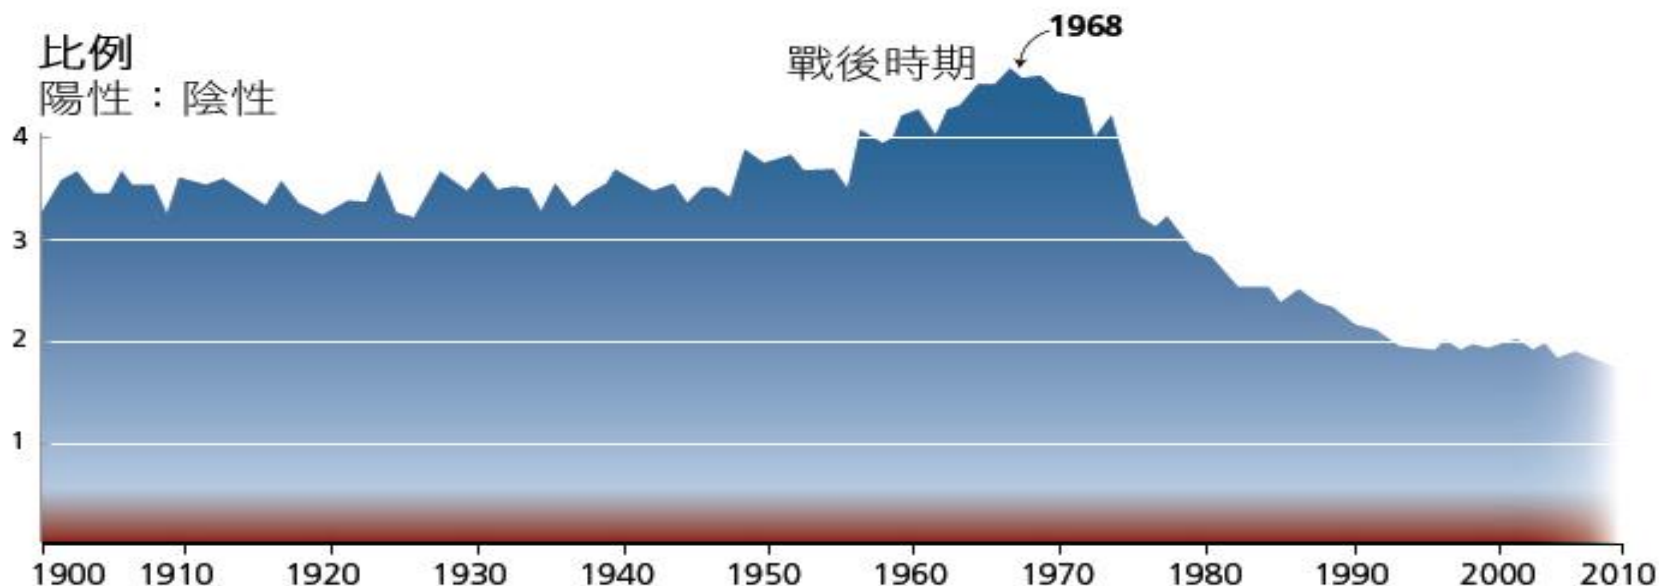

Word
Vectors

- 相關詞的距離：Man is to computer programmer as woman is to X
- X= homemaker
- 使用Word2Vec的系統，會繼續傳播此偏見

Google翻譯的錯誤-歧視歷史的復活?

美國圖書中陽性代名詞與陰性代名詞的比例，1900-2008

比例的改變與女性參與勞動、教育、首次婚姻年齡等因素並行。

陽性代名詞("he", "him", "his", "himself")與陰性代名詞("she", "her", "hers", "herself")的比例在1968年達到最高峰，為4：1。到2000年這個比率劇烈下降到2：1 (Twenge et al., 2012)

資料來源：Google Books資料庫 (達120萬本書籍) 的美國英語語料庫
重製自Twenge et al., 2012

工法二：設想研究的優先順序

- 性別體制如何影響要做什麼研究？
- 誰可能從研究受惠，誰可能被忽略？
- 現有的做法，包括研究補助單位，是否鼓勵性別化創新？

汽車碰撞試驗的假人: Sam & Linda

- 1949年，美國試驗用假人，身高為成年男性的中位數
 - 多以男性身體作為假人標準，女性是小版的男性，逐漸加入小孩
 - 1996年開始有孕婦假人
 - Volvo 2002年設計了 Linda 假人
- 更完備的測試方法
- 更安全的汽車設計

「Sierra Sam」於1949年開發出來以供美國空軍測試彈射座椅，其代表美國成年男性之中位數身高與體重的第95百分位。

富豪汽車公司 (Volvo) 的「Linda」是工程師Laura Thackray於2002年為真實汽車撞擊試驗用孕婦假人而設計的。「Linda」可以模擬高速撞擊對子宮、胎盤和胎兒的影響。

質疑現有標準，建立孕婦的模擬試驗

Gendered Innovation 2: Pregnant Computer Crash Models

Pregnant crash test dummies are used to test seatbelts and other safety features in automobiles. Seatbelts were first installed in automobiles in the 1950s, and their use became mandatory in the late 1980s and early 1990s. As early as 1967, the American Medical Association advocated the use of seatbelts by pregnant women based on the notion that both the mother and fetus were safer with a standard 3-point seatbelt than with no seatbelt (Committee, 1972). At that time, little laboratory research in seatbelt design for pregnant women existed, making it difficult to assess the comparative effectiveness of various seatbelt designs and other safety technologies, such as the airbag (Insurance Institute for Highway Safety, 1972). As seatbelt usage increased, injuries caused by lap belts began to raise concerns that seatbelts might be hazardous to the fetus even when mothers were not injured (Committee, 1972).

Current research suggests that pregnant women should use the 3-point seatbelt (McGwin et al., 2004), yet for many women, particularly those who carry low, 3-point seatbelts ride up on the pregnant belly. In a crash, this increases force transmission to the abdomen by three- or four-fold relative to the force transmitted when the belt is worn below the uterus, with a corresponding increased risk of fetal injury (Pearlman et al., 1996).

Gendered innovations in the development of pregnant crash test dummies and computer simulations have the potential to play a key role in increasing seatbelt safety for pregnant women.

While improvements to the pregnant crash test dummy (the MAMA-2B created in 1996) are ongoing, in 2002, researchers in the U.S. adapted crash simulation software to model a pregnant female with a virtual uterus, placenta, and amniotic fluid as well as uterosacral and round ligaments (Moorcroft, 2003). Using this computer model, validated by cadaver and real-world crash data, researchers modeled differences in outcomes between unbelted, belted, and improperly-belted pregnant passengers. In 2008, developers further improved this computer model by adding a realistic 38-week fetus (developed using ultrasound images) and modeling in utero fetal motion during impact (Acar et al., 2009).

In 2002, Volvo also developed a virtual pregnant crash dummy "Linda", in her 36th week of pregnancy (Björner et al., 2006; Schraudner et al., 2006). Other car companies have also adopted computer models in their safety testing.

Conclusions

Gendered Innovations have led to more inclusive standards for crash test dummies. Female crash test dummies came into development in the late 1960s, yet pregnant

The 3-point seatbelt was developed in 1959.

"Linda" by Volvo, a virtual pregnant crash-test dummy designed in 2002 by engineer Laura Thackray. "Linda" models the effects of high-speed impact on the womb, placenta, and fetus.

1960年代AMA提出孕婦使用三點式的安全帶，以保護孕婦與胚胎，但是當時並沒有實驗室研究，來評估使用不同的安全措施（不同的安全帶設計，或是安全氣囊等），也有一些受到安全帶傷害的情況。

目前研究認為孕婦應該採用三點式安全帶，但是對於肚子很大的孕婦，發生意外時，衝撞的力道會透過安全帶衝擊到腹部，是否對胎兒有影響，還需要測試。

Volvo建立了懷孕36週的琳達

Lesbian, Gay, Bisexual and Transgender Health

People who are lesbian, gay, bisexual, or transgender (LGBT) are members of every community. They are diverse, come from all walks of life, and include people of all races and ethnicities, all ages, all socioeconomic statuses, and from all parts of the country. The perspectives and needs of LGBT people should be routinely considered in public health efforts to improve the overall health of every person and eliminate health disparities. [Read more »](#)

A Population-Based Study of Sexual Orientation Identity and Gender Differences in Adult Health

Kerith J. Conron, ScD, MPH, Matthew J. Mimiaga, ScD, MPH, and Stewart J. Landers, JD, MCP

Most research on sexual minority health in the United States has been conducted using convenience samples. Although the findings of this research have made significant contributions to the literature, data collected from nonprobability samples have limited utility for public

Objectives. We provide estimates of several leading US adult health indicators by sexual orientation identity and gender to fill gaps in the current literature.

Methods. We aggregated data from the 2001–2008 Massachusetts Behavioral Risk Factor Surveillance surveys (N=67 359) to examine patterns in self-reported health by sexual orientation identity and gender, using multivariable logistic regression.

Conron, K. J., Mimiaga, M. J., & Landers, S. J. (2010). *American journal of public health, 100*(10), 1953–1960.

Sexual Orientation and Mental and Physical Health Status: Findings From a Dutch Population Survey

Theo G. M. Sandfort, PhD, Floor Bakker, PhD, François G. Schellevis, MD, PhD, and Ine Vanwesenbeeck, PhD

Several studies have shown that gay, lesbian, and bisexual people have an increased risk for mental health problems.^{1–5} With the exception of HIV infection, differences in physical health status by sexual orientation have hardly been investigated, although some studies suggest that such differences exist.^{6,7} This is the first study to assess the relationship be-

Objectives. We sought to determine whether sexual orientation is related to mental and physical health and health behaviors in the general population.

Methods. Data was derived from a health interview survey that was part of the second Dutch National Survey of General Practice, carried out in 2001 among an all-age random sample of the population. Of the 19 685 persons invited to participate, 65% took part in the survey. Sexual orientation was assessed in persons aged 18 years and older and reported by 98.2% of 9684 participants. The respondents' characteristics are comparable with those of the Dutch general population.

Sandfort, T. G., Bakker, F., Schellevis, F. G., & Vanwesenbeeck, I. (2006). *American journal of public health, 96*(6), 1119–1125.

表 4-2-1：「有無婦科就醫經驗」、「婦科看診滿意度」整合統計表

有無婦科就醫經驗			婦科看診滿意度			
項目	人數	百分比 (%)	項目	人數	百分比 (%)	有效百分比 (%)
有	735	48.3	非常不滿意	39	2.6	5.3
			不滿意	204	13.4	27.8
			沒意見	341	22.4	46.4
			滿意	145	9.5	19.7
			非常滿意	6	0.4	0.8
沒有	788	51.7	跳答	788	51.7	
總和	1523	100.0		1523	100.0	100.0

工法三：

重新設想核心概念與性別的關係

- 原有的預設是否有性別偏誤
 - 找尋現有相關性別文獻佐證
- 主流研究步驟是否忽略重要的性別現象，影響研究創新（例如，抽樣偏誤）

From: **Mortality Risk Associated With Low-Trauma Osteoporotic Fracture and Subsequent Fracture in Men and Women**

JAMA. 2009;301(5):513-521. doi:10.1001/jama.2009.50

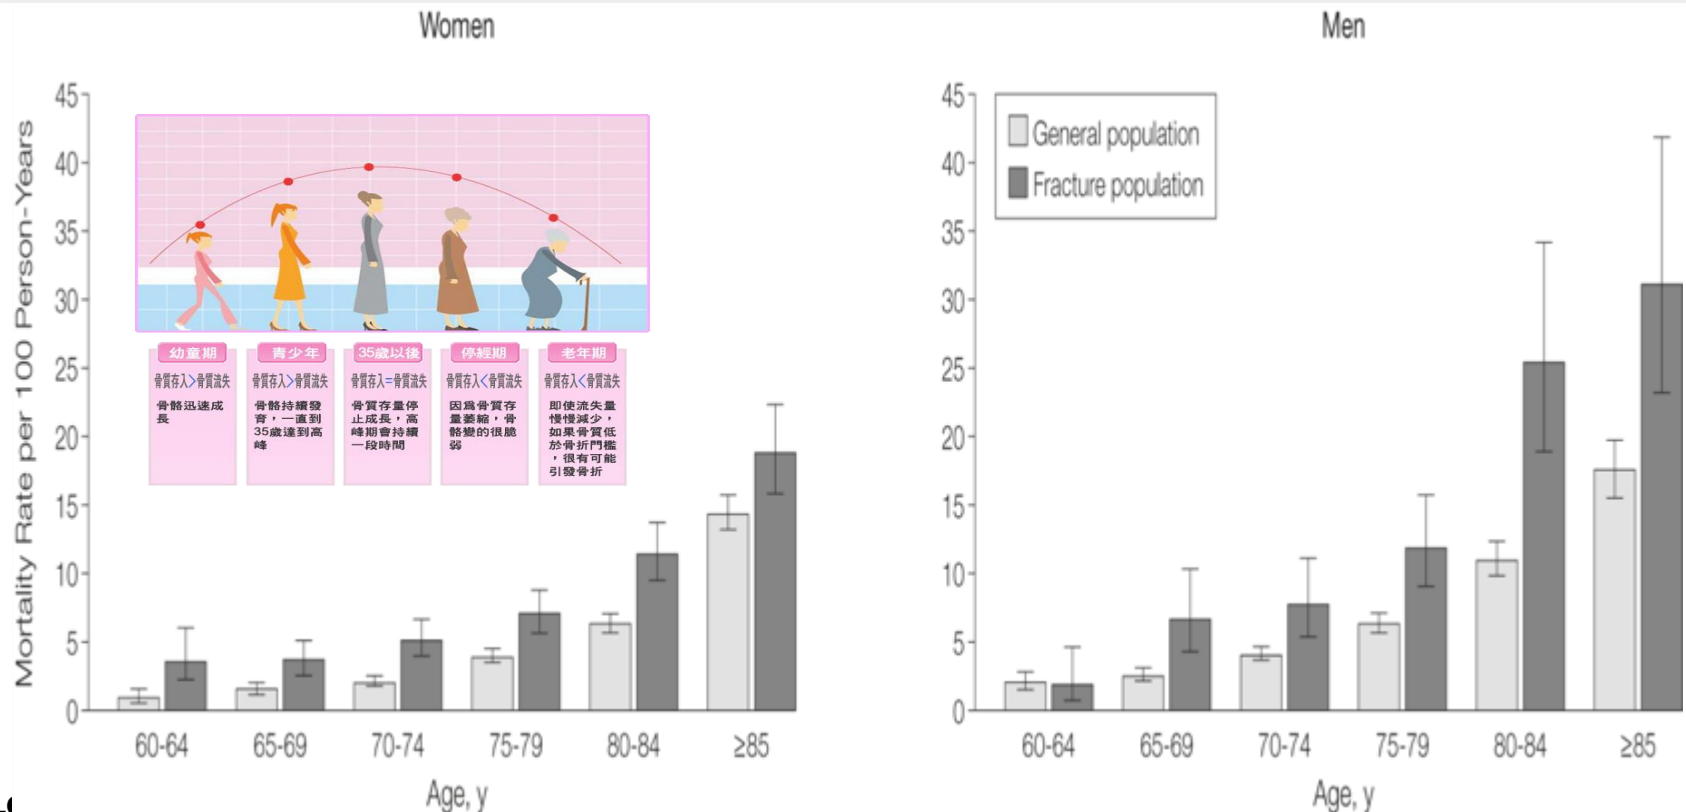

Figure Legend

Date of download: 9/29/2013

In Dubbo's general population, there were 2245 women and 1760 men aged 60 years and older. Of the fracture participants, 952 were women and 343 were men. Error bars indicate 95% confidence intervals.

把男性納入生殖研究

淺色男性最精確、深色女性誤差多

Gender Classifier	Darker Male	Darker Female	Lighter Male	Lighter Female	Largest Gap
 Microsoft	94.0% 	79.2% 	100% 	98.3% 	20.8% 
 FACE++	99.3% 	65.5% 	99.2% 	94.0% 	33.8% 
 IBM	88.0% 	65.3% 	99.7% 	92.9% 	34.4%

修正性別偏見的「交織性」基準

- 人臉辨識：男性、白人的精確度較高。
- Joy Buolawini & Timnit Gebru (2018) 建立
“Intersectional Benchmark”，以修正性別偏見。
- 誰的臉要當成基準資料庫？
1270名國會議員！

Oprah Winfrey 是76.5%可能是男性？

Figure 1: Example images and average faces from the new Pilot Parliaments Benchmark (PPB). As the examples show, the images are constrained with relatively little variation in pose. The subjects are composed of male and female parliamentarians from 6 countries. On average, Senegalese subjects are the darkest skinned while those from Finland and Iceland are the lightest skinned.

更平均涵括不同膚色的**基準**

Figure 3: The percentage of darker female, lighter female, darker male, and lighter male subjects in PPB, IJB-A and Audience. Only 4.4% of subjects in Audience are darker-skinned and female in comparison to 21.3% in PPB.

工法五：重視各方洞見

- 參與式研究：
藉此平衡設計者與使用者之間的利益與責任。
- 問卷、訪談、焦點團體
- 不同性別可能擁有不同的經驗與知識

特定性別擁有的傳統知識

【一亀小・放射線（空間線量）測定結果まとめ】 *単位はすべて $\mu\text{Sv/h}$

測定日：2011年6月6日（晴）、7日（くもり）
使用機器：「はかるくん」「はかるくんII」（文科省貸与）

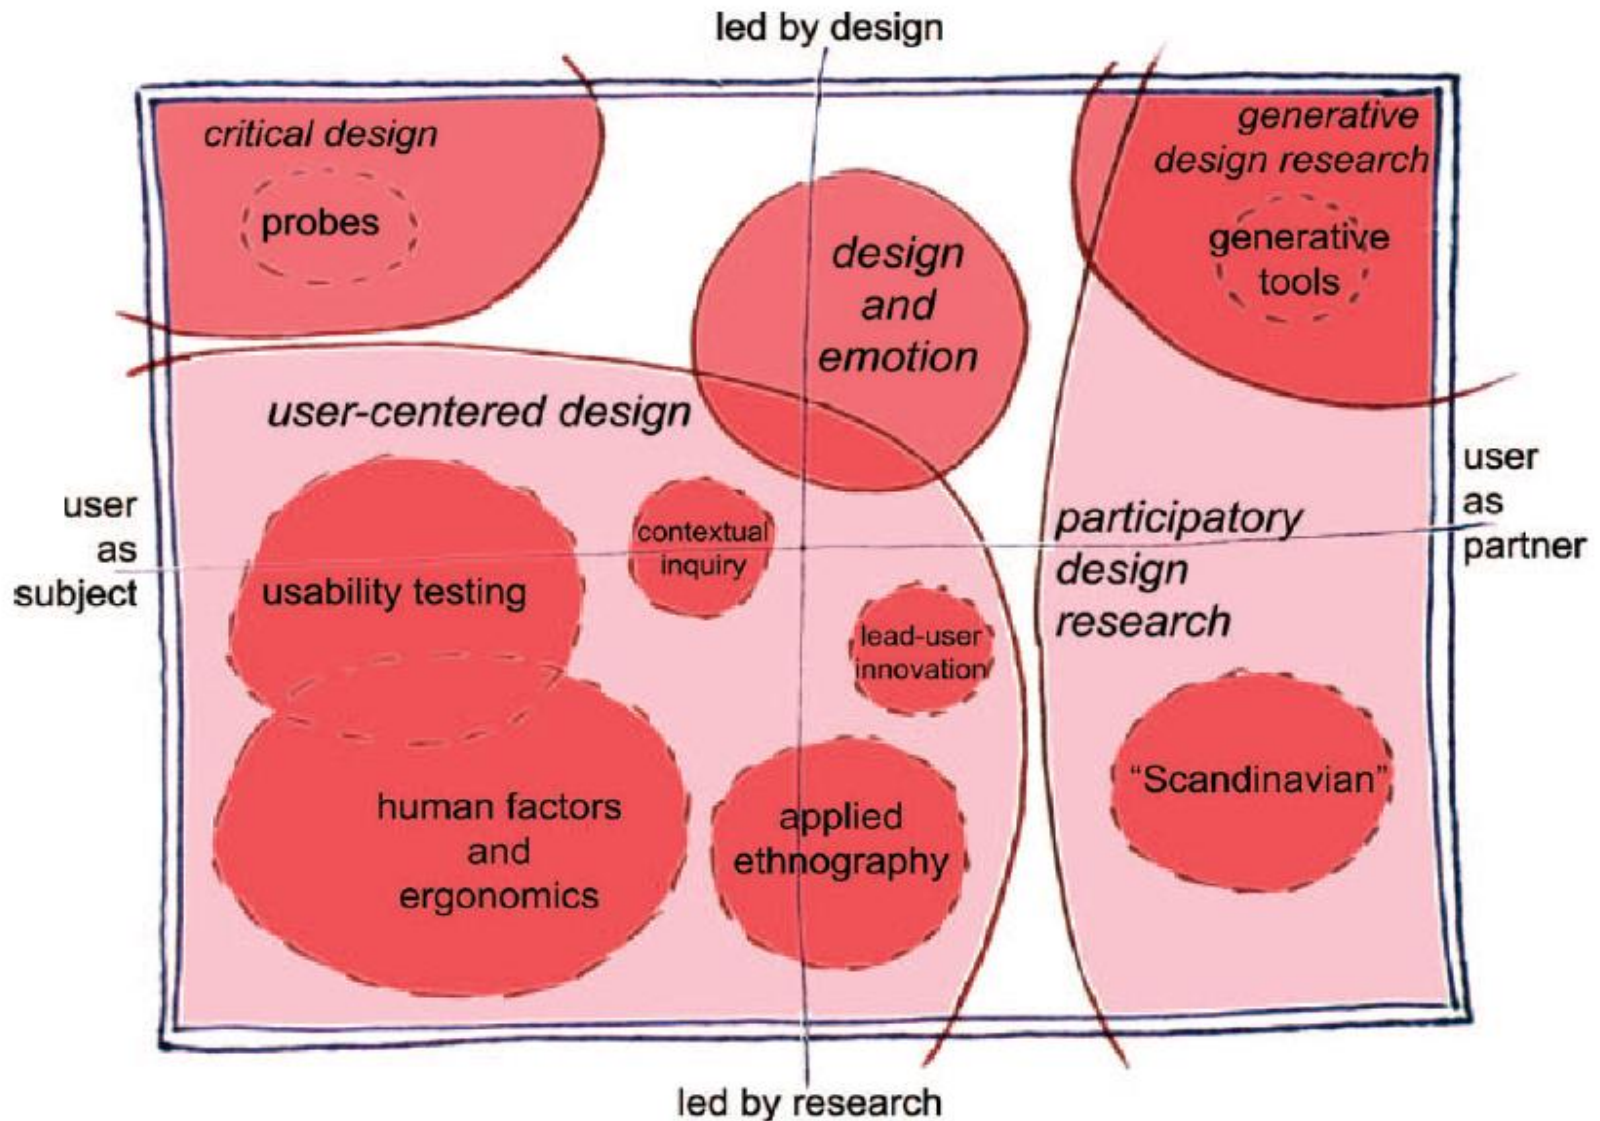

> 0.3 $\mu\text{Sv/h}$

> 0.114 $\mu\text{Sv/h}$

現在、文部科学省が掲げている目標値「年間線量1ミリシーベルト」は、時間あたりにおすと、0.114 マイクロシーベルト（ $\mu\text{Sv/h}$ ）を超える値を黄色で示した。

まとめ

- ・校内は0.034～0.051 μSv と低い。
- ・校庭は中央では0.070（地表でも0.083）と低いが、周辺部分では0.117（地表で0.119）と若干高い部分もある。
- ・植え込みの土は地表面で0.173と若干高め。土いじりをした後はよく手を洗う（爪の中まで洗う）、うがいをするなどの対策が可能。
- ・プールサイドは水はけもよく、校内と校庭の間くらいの低い値0.055。
- ・もっとも高かったのは屋上プールの排水口。水が集まりやすい屋上入り口も高めだった。プール開始前に大人が掃除した方がよいと思われる。

建立真實烏托邦

- to society: by making research more responsive to social needs
- to business: by developing new ideas, products and services
- to design: by introducing new concepts, tools and processes
- to research: by ensuring excellence and enhancing sustainability

Gendered Innovation as Responsible Innovation

Four dimensions of responsible innovation.

Dimension	Indicative techniques and approaches	Factors affecting implementation
Anticipation 展望未來	Foresight Technology assessment Horizon scanning Scenarios Vision assessment Socio-literary techniques	Engaging with existing imaginaries Participation rather than prediction Plausibility Investment in scenario-building Scientific autonomy and reluctance to anticipate
Reflexivity 反思性	Multidisciplinary collaboration and training Embedded social scientists and ethicists in laboratories Ethical technology assessment Codes of conduct Moratoriums	Rethinking moral division of labour Enlarging or redefining role responsibilities Reflexive capacity among scientists and within institutions Connections made between research practice and governance
Inclusion 包含多元	Consensus conferences Citizens' juries and panels Focus groups Science shops Deliberative mapping	Questionable legitimacy of deliberative exercises Need for clarity about, purposes of and motivation for dialogue Deliberation on framing assumptions Ability to consider power imbalances Ability to interrogate the social and ethical stakes associated with new science and technology Quality of dialogue as a learning exercise
Responsiveness 積極回應	Deliberative polling Lay membership of expert bodies User-centred design Open innovation	Strategic policies and technology 'roadmaps' Science-policy culture Institutional structure Prevailing policy discourses Institutional cultures Institutional leadership Openness and transparency Intellectual property regimes Technological standards
	Constitution of grand challenges and thematic research programmes Regulation Standards Open access and other mechanisms of transparency Niche management ^a Value-sensitive design Moratoriums Stage-gates ^b Alternative intellectual property regimes
