Research Agencies Respond Swiftly to Zika Outbreak

Reacting to the recent Zika virus (ZIKV) outbreak, global research funding organizations, including the European Commission, the National Science Foundation (NSF), the National Institutes of Health (NIH), and the São Paulo Research Foundation (FAPESP), are seeking ZIKV-related research proposals.

The World Health Organization (WHO) declared the virus a Public Health Emergency of International Concern following a recent spike in the number of severe congenital brain malformations in Latin America. Prior to 2013, the mosquito-borne virus was best known for relatively mild symptoms. However, large increases in medical conditions like microcephaly and neurological disorders in affected regions raise troubling questions about potential ZIKV complications.

輸入您欲查找的關鍵字，
例：nanomaterial* (奈米材料)

The screenshot shows the 'Profile Advanced Search' interface. At the top, there are navigation tabs for 'Funding' and 'Profiles', and a search bar. The main search area includes a search box with the text 'nanomaterial*'. Below the search box, there are two checkboxes: 'Search inside my institution' and 'Search outside my institution', both of which are checked. A red dashed box highlights these two checkboxes, with an orange arrow pointing to them and the text '勾選其他機構人員'. Below the search box, there is a 'Search in:' section with several checkboxes: 'Expertise', 'Keywords', 'Homepage', 'Pub Page', 'CV Page', 'Title', 'Abstract', and 'Scholar Name'. A blue dashed box highlights these checkboxes, with an orange arrow pointing to them and the text '勾選查詢的欄位'. At the bottom, there is a 'Search by Name' section with three input fields: 'First name', 'MI', and 'Last name'. An orange arrow points to the 'MI' field with the text '也可直接查詢人名'. Expertise Nanomaterials for Electronics, Sensing, and Energy The Hersam Research Group applies the fundamental paradigm of materials science and engineering (i.e., the development of structure-property-processing-performance relationships) to hybrid hard and soft materials at the nanometer length scale. In many cases, the objective is to apply organic molecules to inorganic substrates in an effort to increase the functionality of the resulting hybrid system (e.g., silicon-based molecular electronics and more »
