Confucianism, once thought to be a dead doctrine, has made [Download mp3](#) comeback during the past 20 years. Cited as a major force behind East Asia's economic "miracles," it is now finding a renewed following among mainland Chinese grown disillusioned with communism. Yet what exactly Confucianism means is hard to say. All the more reason, Jonathan **Spence** urges, to return to the man himself--and to the little we know about his life and words.

Across the centuries that have elapsed since he lived in northern China and lectured to a small group of followers on ethics and ritual, the ideas of **Confucius** have had a powerful resonance. [Soon after his death in 476 B.C.](#), a small number of these followers

Cliffhanger Days:
A Chinese Family in the Seventeenth Century

JONATHAN SPENCE

The text was written during the cliffhanger days of my life when called Zhang Shi. He was born in 1697, in the prosperous city of Shanghai, near the river of central China. Zhang Shi was rich by the standards of his time (and perhaps by any standards in any time); he received a splendid education, and lived an extremely comfortable life, except for a few short periods when he chose to visit the slums of his daily world by taking frugal trips. Mostly these were to nearby Hangzhou, celebrated across Chinese history for the scenic beauty of its West Lake, where his family had a lakeside villa, or to the Yangtze River city of Nanjing (previously China's capital). Now and again he ventured east the river to the commercial hub of Yangzhou on the Grand Canal, or north again to the province of Shandong, where his father had a job for a while with a private family. In Shandong he made a point of visiting Confucius' temple near the Mount Tai and the home of Confucius, which had survived from all over China, but if he went to Beijing he left no description of it.

Religious Studies Review • VOLUME 40 • NUMBER 1 • MARCH 2014

CONFUCIUS IN EAST ASIA: CONFUCIANISM'S HISTORY IN CHINA, KOREA, JAPAN, AND VIET NAM. By Jeffrey L. Richey. *Key Issues in Asian Studies*, 13. Ann Arbor, MI: Association of Asian Studies, 2013. Pp. xvii + 99. \$20.06.

Like all volumes in the "Key Issues" series, this book traces central themes in Asian Studies and presents them in a clear, accessible way for nonspecialists (teachers, undergraduates, etc.) Richey draws on a wealth of scholarship to detail the rise and spread of the *rujia* ("Confucian tradition") from Warring States-era China through the rest of East Asia, clearly demonstrating the tradition's political and cultural institutionalization. His concluding chapter, "Confucianism in East Asia Today," is a particularly good overview of the continuing role of Confucianism as a bearer of "Asian values" in the contemporary world. It is far too easy to quibble over minor points in a book of this sort (I would have liked more details on Buddhist-Confucian interaction in Tang China), but those of us who teach this sort of material at the undergraduate level should deeply appreciate Richey's efforts. Certainly his "Suggestions for Further Reading," with its liberal inclusion of URLs alone, make this book an excellent resource. *Confucius in East Asia* is a good choice for East Asian history and culture classes, and I plan on using it when I next teach my university's "Introduction to Asian Studies" course—readers of *RSR* will, I hope, take that as my strong endorsement.

essay on a Sufi mystic in this volume, even the editor acknowledges as being "a bit anomalous," although it does provide some comparative perspective to the other four focused on Pentecostalism. Those interested in Korean and Japanese Pentecostalism will be grateful for this book.

SEVEN TAOIST MASTERS: A FOLK NOVEL OF CHINA. Translated by Eva Wong. Boston: Shambhala Publications, 1991. Pp. 208. \$16.95.

This is a delightful novel of late Ming times, fictionalizing the lives of Wang Che (1112–1170) and his seven primary disciples. The unknown author clearly intended to instruct as well as entertain: didactic monologues introduce the practice of self-cultivation according to Wang's Ch'ian-chen tradition. Through dedication, sacrifice, and meditative discipline, the characters overcome various failings and exemplify the process of moral and spiritual maturation. The modern reader can identify with the spiritual journeys of the characters, particularly Ch'iu Ch'ang-ch'un, Ma Tan-yang, and his wife Sun Pu-erh (the novel's true heroine). Scholars of Chinese culture will enjoy analyzing the interplay and creative tensions among the competing value-systems of late imperial China as focused in "real-life" situations. This book belongs in all libraries and will make a stimulating addition to courses in Asian religion.

A Review on Polymeric Membranes and Hydrogels Prepared by Vapor-Induced Phase Separation Process

In 1918, Zsigmondy and Bachmann presented a new method to induce phase separation of a homogeneous polymeric solution from a vapor phase. The so-called vapor-induced phase separation (VIPS) was born. In a century, the body of knowledge on polymer membranes and hydrogels prepared by VIPS has grown importantly, which suggests the need for a critical review. Slowness of mass transfers involved in VIPS, attributed to the resistance at the gaseous phase/liquid phase interface, permits reaching better control of polymer membrane formation than with the popular wet-immersion process. As a result, a broad variety of morphologies can be obtained and well controlled. The control of testing conditions and formulation parameters also permits tuning and tailoring morphologies, which arises in various membranes properties, and led scientists to investigate the possibility of forecasting mass transfers in VIPS. Therefore, at the end of the twentieth century, first models were developed to describe this process, and validated by comparing simulated data to experimental results. Afterwards, studies demonstrated the possibility of predicting membrane morphologies from the knowledge of operating conditions. This article aims at reviewing the work done so far reporting this process to prepare polymer membranes and hydrogels. The experimental set-ups will be introduced as well as the different polymer/solvent/nonsolvent and polymer/additive(s)/solvent/nonsolvent systems used and the morphologies obtained. The effect of testing conditions and formulation parameters on the structure of the matrices will be subsequently discussed. Close attention will be given to the fundamental theory of VIPS before moving onto the potential applications of such polymer matrices.

摘要

In 1918, Zsigmondy and Bachmann presented a new method to induce phase separation of a homogeneous polymeric solution from a vapor phase. The so-called vapor-induced phase separation (VIPS) was born. In a century, the body of knowledge on polymer membranes and hydrogels prepared by VIPS has grown importantly, which suggests the need for a critical review. Slowness of mass transfers involved in VIPS, attributed to the resistance at the gaseous phase/liquid phase interface, permits reaching better control of polymer membrane formation than with the popular wet-immersion process. As a result, a broad variety of morphologies can be obtained and well controlled. The control of testing conditions and formulation parameters also permits tuning and tailoring morphologies, which arises in various membranes properties, and led scientists to investigate the possibility of forecasting mass transfers in VIPS. Therefore, at the end of the twentieth century, first models were developed to describe this process, and validated by comparing simulated data to experimental results. Afterwards, studies demonstrated the possibility of predicting membrane morphologies from the knowledge of operating conditions. This article aims at reviewing the work done so far reporting this process to prepare polymer membranes and hydrogels. The experimental set-ups will be introduced as well as the different polymer/solvent/nonsolvent and polymer/additive(s)/solvent/nonsolvent systems used and the morphologies obtained. The effect of testing conditions and formulation parameters on the structure of the matrices will be subsequently discussed. Close attention will be given to the fundamental theory of VIPS before moving onto the potential applications of such polymer matrices.

AND

兩個條件都要符合

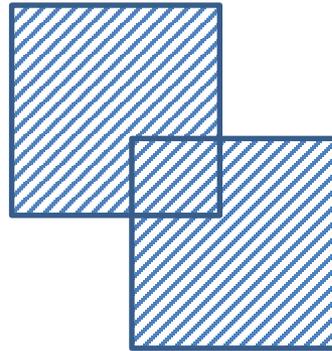

例：探討「果蠅遺傳、突變和學習行為研究」

果蠅 **AND** 遺傳 **AND** 學習行為

OR

只要其中一個條件符合

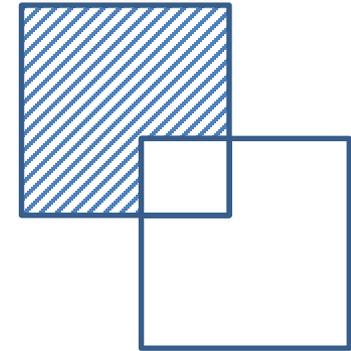

例：查「基因改造玉米」

genetically modified corn
OR GM corn
OR transgenic corn

NOT

符合前者條件
並排除後者條件

例：探討「基因工程與複製人」議題

cloning **NOT** sheep
